Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Print Name: Kevin Rodriguez

Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Print Name: Victor Santos

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely, ORoye

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Print Name: Andy Goicoechea

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,

Re: Santa Fe Haciendas, LLC, and CEMEX Construction Materials Florida, LLC / Public Hearing No. 09-176 / SW Corner of Krome Avenue and Theoretical SW 90th Street, Miami-Dade County, FL

Dear Chairman Martinez and Commissioners,

I support this zoning application because of the much needed economic activity that it will help generate. The limestone mining industry has had a long and prosperous history in Miami-Dade County and has helped to maintain many families over the years with good paying and stable employment.

The construction materials created from this process are the literal "building blocks" of our local economy upon which we will need to build our economic recovery. Any decrease in the supply of building materials will increase the costs of these raw materials and only stymie the recovery of the local construction industry. The proposed lake excavation is an expansion of a longtime existing quarry and will be compatible with the surrounding area.

The project will help improve the local economy by providing jobs and a reliable source of affordable materials for public and private construction projects. I strongly encourage you to support this application.

Sincerely,
